

ÓSCAR ALARCÓN RIERA

PROGRAMMER

627610248 oscar.alarconri@gmail.com oscaralri.github.io github.com/oscaralri Móstoles, Madrid

Professional Profile

I am a recent graduate with a degree in Video Game Design and Development from Universidad Rey Juan Carlos. In addition to everything I learned during my degree program, I have also worked as a programmer on several video games for various game jams and have worked on projects such as developing a graphics engine using OpenGL.

Skills

Programming Languages: C++, C#, Python, Java and JavaScript.

Frameworks, Libraries and others: ImGui, Phaser, OpenGL, Glad, GLFW and RenderDoc.

Databases: MongoDB and MySQL.

Projects

Graphics Engine in OpenGL

- A graphics engine designed to optimize rendering in order to render a large number of meshes in real time.
- C++, ECS, Handle, Instancing, Batching, Compute Shaders, MultiDrawIndirect, AZDO, Frustum Culling, LOD.

Make Room for the Past

- A video game developed for the GameGen Game Jam. In the game, one half of the screen displayed a room to be decorated, while the other half showed a simulation of a character going about their daily life, which changed in response to the decorations.
- C#, Unity.

Stratum

- A video game developed during the degree. It was an online multiplayer card game based on the food chain.
- C#, Unity

I-Scream

- A video game developed during the degree. It was an online browser game for two players in which the goal was to collect a series of items before your opponent to win.
- Javascript, Phaser, Springboot, API REST, Websockets.

Work Experience

Unity Optimization Intern - Performance Labs (April 2025 - June 2025)

- Profiling and optimization.
- Use of Unity-specific optimization tools.
- Benchmarks and analysis of results.

Education

Design and Development of Videogames - Universidad Rey Juan Carlos (2026)

C1 Level Cambridge Certificate
